## **PROGRAMME INTRODUCTION**

Internet has become part of life of all and without that one cannot live. it has brought enormous benefit to mankind. At the same time, it has created multitude of problems too. Find out the best solution to this dilemma? There is only one way out, "use Internet with due care and diligence". For this we have to become aware of Internet's endless possibilities in the creative and destructive directions. Every organization that uses Internet would have built best available defense mechanisms like Anti-Virus, Firewall, Intrusion Detection Systems(IDS), DMZs etc to protect its valuable assets, datas from Cyber threats. But current day cyber attacks are very complex and these existing defense systems are not adequate to protect. We had witnessed "Wannacry" and "Ransomware" attacks hitting many leading organizations severely. Lack of awareness, full proof protection systems, the right expertise are not known by the users was the main reason for this menace. This 3 days Learning Sessions on the topic will be immensely useful.

## **LEARNING OBJECTIVE**

To make sure, the participants aware of various Internet frauds thereby enabling them to protect their organization and its assets from Cyber attacks. As per Gartner Group, 70% of Cyber-attacks are successful due to lack of awareness among the users who are **the weakest element** in the line of security. This learning Program enable to solve the problems in Cyber Security by better cyber defence at almost zero investment cost.
